

WAMA Labs

The flexible CRO for the important studies

We do *in vivo* with attention to details!

In vivo behavioral psychopharmacology testing for novel drug development with relevance to treatment of schizophrenia and other diseases featuring psychotic symptoms or cognitive impairment.

Fast, efficient and reliable testing of novel drug molecules using rodent drug screening tests.

- WAMA Labs, located in close vicinity to The Linnaeus University Kalmar, Sweden, is a modern, state of the art facility.
- In-house built, custom made equipment for experimental testing optimizes interaction between animal and equipment.
- Our unique approach, based on solid experience in pharmacology and rodent behavior makes data accumulation optimally efficient and reliable.

The CEO of WAMA Labs, Marie-Louise G Wadenberg (Ph D, Associate Professor), with 25 years of active research experience (USA, Canada, Sweden) and over 50 publications, is an internationally acknowledged expert on screening tests for assessment of drug antipsychotic activity and extrapyramidal side effect liability.
